Database Web Services

Instructor: Peter Baumann

Abstract

1. PDF document which describes CD + Logo
2. Website which is accessible through the project's web directory

Our company Logo is as follows:

Index.html

The first page is basically the main navigation page where our individual and business (company user) will be provided with details of search bar to find properties based on whether they want to buy or sell as per different parameters like city, neighborhood and zip code.

Imprint.html

This is the imprint page and the following text which was provided to us in the assignment sheet was pasted here. It is just an imprint that can be used for multiple purposes on our website.

Login/signup.html

This is the first page users find us with a simple google search as we want them to put them into our database to perform future customer analytics on them. We have designed with a minimalistic design approach.

css

The CSS folder contains all our css files for the html files.

Img

The img folder contains basically two things. One is the image which we have used as our background image for the homepage and the second one is the logo image which will be used like a placeholder for multiple pages on our website.
